Office Action Summary

Art Unit:2756

1. Claims 1-30 and 38-50 are presented for examination.
2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-30 and 38-50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cowan et al.

4. Cowan et al (5,828,840) taught the invention substantially as claimed (e.g., as in exemplary claim 1) including a system and method for communicating with a service (e.g., see column 5 lines 1-6, column 9 line 22 et seq and column 10 line 12 et seq), comprising:

- a) initiating a communications link between a browser stored on a client and a server (e.g., see column 2, columns 4-5 under the subtitle "Architecture", column 6 line 20 et seq and column 8 line 13 et seq);
- b) receiving selection of a service identifier from a set of service identifiers (e.g., see column 5 lines 20-30, column 6 line 20 et seq, column 7 line 3 et seq, and column 8 line 19 et seq);

Art Unit:2756

c) receiving downloadable code corresponding to the selected service identifier (e.g., see column 5 line 1 et seq, column 6 line 20 et seq, and column 8 line 13 et seq);

d) using the downloadable code to identify and initiate a network communications path from the browser to a service corresponding to the selected service identifier (e.g., see column 10 line 12 et seq and column 9 line 22 et seq); and

e) using the downloadable code to interface with the service (e.g., see column 10 line 19 et seq and column 11 line 1 et seq.) Cowan et al further taught, at the server, how to interface and forward financial transactions originating from the client to external upstream and database services and route the response back to the client (e.g., see column 10 lines 20 et seq.) What is more significant about Cowan et al reference is that at the server side they used SERVLETS to accomplish this interfacing (e.g., see columns 9-10) as well as using proxies (e.g., see column 9 line 21 et seq.) Other features are all obvious variations of the well known Internet art and they are rejected accordingly

5 It would have been to one of ordinary skill in the Internet art at the time of the invention that the claimed invention differed only by a degree from the teachings of Cowan et al, e.g. in the downloadable code. Cowan et al did not call the applets as downloadable codes or downloadables but this is an obvious variation of the generic code which is downloaded by the server to the client (e.g., see column 5 line 1 et seq) and thus constitutes only difference in a degree. Examiner likes to point out that Cowan et al reference is an excellent reference close to

a 102 in quality. Claims are ridiculously broad and reads on standard Internet practices. For example dependent claims recite accessing URLs. Using URLs to access in the Internet is a standard process.

6. Applicant's arguments with respect to claims 1-30 and 38-50 have been considered but are moot in view of the new ground(s) of rejection.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mehmet Geckil whose telephone number is (703) 305-9676. The examiner can normally be reached on all days of the week from 8:00 A.M. to 4:00 P.M.
